

Revive Your Old Pokers

POKER Players just love these old cabinets. You can dress up the games and put them in new cabinets with bigger screens and buttons, but they keep going back to their favourite cabinets.

However, you can't get spares, you can't get game upgrades, they don't support cashless...

At ACE we have solved this problem for you, so you can offer your players the same experience, the same games on the same cabinet.

With our Poker Conversion kit and the Osiros Server Based Gaming Platform you can offer all the favourite poker games on your old poker cabinets, whether they are PE+, V2000 or Lotus

Conversion Kit

The conversion kit is made up of a new touch screen LCD, the server-based gaming PC platform, PSU, a set of stereo speakers, and new buttons.

An onsite game server allows you to configure the games and deploy them to your cabinets from the comfort of your desk and provide your customers with a multi-game player interface.

“Unserviceable”

You are lucky if you can find parts for these popular cabinets. The 15” CRT screens are not available; the power suppliers and main boards are obsolete as well as many of the electronic components required that can be replaced. The skills to maintain these machines are also a dying art.

Convert the cabinet to a PC based cabinet with our server-based gaming platform and give your players the experience they love with a low maintenance and supported gaming machine.
